Sir,

Please refer to your application for Amended Development permission for Residential Building on Plot No.- 79 + 80 & 93 + 94, Sector- 08, At.- New Panvel(E), Tal.- Panvel, Dist.- Raigad.

The Amended Development permission is hereby granted to construct Residential Building on the plot mentioned above.

The Developers / Builders / Owners shall take all precautionary measures for prevention of Malaria breeding during the construction period of the project. If required, you can approach Health Department PMC, for orientation program and pest control at project site to avoid epidemic.

You have to pay the necessary charges due to GST if applicable in future as per Panvel Municipal Corporation policy and as informed to you in writing and if not paid the permission granted will be revoked.

You will ensure that the building materials will not be stacked on the road during the construction period.

It is well aware that the State of Maharashtra is threatened with the spread of COVID-19 Virus and therefore, to take certain emergency measures to prevent and contain the spread of the virus the Govt. of Maharashtra & Hon. Commissioner, PMC issued the guidelines from time to time. Considering these facts, this C.C. / Plinth checked Certificate / O.C. is issued, subject to strict compliance of terms & conditions as mentioned in Annexure-A attached herewith.

Thanking you,

SCHEDULE RAIN WATER HARVESTING

Rain Water Harvesting in a building site include storage or recharging the ground water by rainwater falling on the terrace or on any paved or unpaved surface within the building site. The following systems may be adopted for harvesting the rainwater drawn from terrace and the paved surface.

- i) Open well of a minimum 1 m. diameter and 6m. in depth into which rain water may be channeled and allowed to filter for removing silt and floating material. The well shall be provided with ventilating covers. The water from the open well may be used for non-potable domestic purposes such as washing, flushing and for watering the garden etc.
- ii) Rain Water Harvesting for recharge of groundwater may be done through a bore-well around which a pit of 1m. Width may be excavated up to a depth of at least 3m. and refilled with stone aggregate and sand. The filtered rain water may be channeled to the refilled pit for recharging the bore-well.
- iii) An impressive surface/underground storage tank of required capacity may be constructed in the setback or other open spaces and the rain water may be channeled to the storage tank. The storage tank shall always be provided with ventilating covers and shall have draw-off taps suitably placed so that rain water may be drawn off for domestic, washing, gardening and such other purposes. The storage tank shall be provided with an overflow.
- iv) The surplus rain water, after storage, may be recharged into ground through percolation pits or trenches or combination of pits and trenches. Depending on the geomorphological and topographical conditions, the pits may be of the size of 1.20 m. width X 1.20 m. length X 2m. to 2.50 m. depth. The trenches can be of 0.60 m. width X 2 to 6 m. length X 1.50 to 2 m. depth. Terrace water shall be channeled to pits or trenches. Such pits or trenches shall be back filled with filter media comprising the following materials :-
 - a) 40 mm stone aggregate as bottom layer up to 50% of the depth.
 - b) 20 mm stone aggregate as lower middle layer up to 20% of the depth.
 - c) Coarse sand as upper middle layer up to 20% of the depth.
 - d) A thin layer of fine sand as top layer.
 - e) Top 10% of the pits/trenches will be empty and a splash is to be provided in this portion in such a way that roof top water falls on the splash pad.
 - f) Brick masonry wall is to be constructed on the exposed surface of pits/trenches and the cement mortar plastered. The depth of wall below ground shall be such that the wall prevents loose soil entering into pits/ trenches. The projection of the wall above ground shall at least be 15 cm.
 - g) Perforated concrete slabs shall be provided on the pits/trenches.
 - h) If the open space surrounding the building is not paved, the top layer up to a sufficient depth shall be removed and refilled with coarse sand to allow percolation of rain water into ground.
- v) The terrace shall be connected to the open well/bore-well/storage tank/ recharge pit/trench by means of HDPE / PVC pipes through filter media. A valve system shall be provided to enable the first washing from roof or terrace catchment, as they would contain undesirable dirt. The mouth of all pipes and opening shall be covered with mosquito (insect) proof wire net. For the efficient discharge of rain water, there shall be at least two rain water pipes of 100 mm. dia. for a roof area of 100 sq.m.

- vi) Rain Water Harvesting structures shall be sited as not to endanger the stability of building or earthwork. The structure shall be designed such that no dampness is caused in any part of the walls or foundation of the building or those of an adjacent building.
- vii) The water so collected/recharged shall as far as possible be used for non-drinking and non-cooking purpose. Provided that when the rain water in exceptional circumstances will be utilized for drinking and/or cooking purpose, it shall be ensured that proper filter arrangement and the separate outlet for bypassing the first rain water has been provided. Provided further that, will be ensured that for such use, proper disinfectants and the water purification arrangements have been made.
The structures constructed under this provision shall not be counted towards FSI computation.
