1. HYDRANT SYSTEM:

ON/OFF facilities located near the hose reel hose or hydrant outlet at each floor the main Fire Pump at the underground water tank with a capacity to discharge 800 liters per minute at 3 bar pressure as measured at the terrace level should be installed.

The Riser for the buildings exceeding 18 meters and above 18 meters height should not be of less than 100 mm. internal diameter. The riser should be connected to the bottom of the terrace tank with a step valve and a NRV to act as a Down - corner.

One riser is required for every 1000sq. meters floor area and if the floor area is more than 1000sq. meters, then a separate riser should be provided for every 1000sq. meters floor area. Each riser should have a separate riser with all the fittings at floor level. Each floor should have one hydrant outlet with a coupling for attaching a 65 mm dia hose & 25 mm bore hose-reel hose with 5 mm. SS. Shut-off nozzle at each floor landing. The length of the hose reel hose should be enough to reach the farthest corner of the floor. Hose-box with 15 meters long 65mm. dia. hose and 12.5 mm. bore nozzle at alternate floors. The hose-reel hose should be coupled to the Riser.

Fire-service inlet should be installed at a point near the entry to the premises where a Fire service vehicle can approach easily.

A permanent hydrant point comprising of 65 mm dia size 2 inch of hydrant. Overhead tank Railing Bypass connection should be done at the terrace level. The Overhead tank shall be of a capacity of not less than 20,000 liters. The Underground tank shall be of not less than 1,00,000 liters.

2. FIRE LIFT:

The Fire-Lift and all the lifts should have a provision to ground automatically in case of electricity failure. Each building should have at least one lift as a Fire-Lift and if the building is divided into two or more parts then each should have a Fire-Lift. Lift-well should have blowers to pressurize the lift-well so connected that it will automatically operate when alarm call point is operated, so that it prevents the lift well getting smoke fogged.

3. FIRE ALARM:

Fire alarm call point to be installed at each floor with sounders capable of being heard all throughout the building.

4. FIRE EXTINGUISHERS:

One Carbon Dioxide (CO2) type extinguisher of 4.5 kg. with ISI mark, and one extinguisher of 6 kg. Dry Powder (D.P.) type extinguisher with ISI mark to be installed on each floor in case of commercial building.

One Carbon Dioxide (CO2) type extinguisher of 4.5 kg. with ISI mark. OR Two Carbon Dioxide (CO2) type extinguisher of 2 kg. with ISI mark capacity on alternate floors in case of residential building.

If the building is divided into two or more parts then each part should have these extinguishers installed.

5. STAIRCASE:

The staircase has to be open from at least one of two sides but if the staircase is in the centre zone of the building it has to be pressurized to prevent it from getting smoke fogged.

The Riser/Down-corner should be located in the staircase or close to it in making easily approachable in case of Fire from the floor below or above.

6. BASEMENT:

The basement of 200 sq. meters or more should be protected with Automatic Sprinkler system with at least one sprinkler head for actual car parking space.

Additionally be protected by a hydrant outlet and two 25 mm. bore hose-reel hose with 5 mm. bore nozzle at each basement level.

7. LIGHTNING ARRESTER:

A lightning arrestor should also be installed and be properly earthed to prevent damage to the building when the lightning strikes.

8. PHOTO LUMINESCENT (AUTO GLOW) SIGNAGES:

If the building falls in a confined area or if it has an enclosed staircase or is not well lit-up on the inside, then adequate photo luminescent (auto glow) signages should be displayed at each floor / landing / pathway / door-end along all exit routes leading to the ground level. The signage should indicate the lighting, the safety equipment present on the respective floor/landing/pathway/door-end and along all exit routes leading to the ground level.

9. ELECTRIC POWER SUPPLY TO THE ENTIRE FIRE SAFETY SYSTEM

Electricity supply to the fire pump, fire alarm system, staircase pressurization system and fire lift should be made available from the main Electrical supply (i.e. from Electrical power supply of the company) This is to ensure availability of power supply to the fire protection & safety system even after the main electrical supply to the building is switched off at the time of fire.

10. INDIVIDUAL FIRE SEFTY SYSTEM

FIRE SEFTY SYSTEM SHOULD BE PROVIDED IN DIVIDUAL SHOWROOM BY OWNER

IMPORTANT INSTRUCTIONS:

After inspection of a low-rise building by the fire service authority if the officer concerned feels in need for additional fire prevention/protection measures / ventilation system required or equipment (i.e. - Passive system / Suppression system / Fire door - Window / Detection system/ Active system/ Sprinkler / Drencher etc.) as per Fire load / Fire risk / Public gathering Potential / Occupancy / Confined area. Those additional measures / equipment have to be implemented / installed.

After inspection of a service building by the fire service authority, the fire officer will issue a certificate of approval. The certificate of approval will be valid for a period of 12 months. The certificate of approval will be valid for a period of 12 months. The certificate of approval will be valid for a period of 12 months.

RESIDENTIAL (AS PER DPG-2021-RESIDENTIAL-2 (R/2) AS 4444.

1. HYDRANT SYSTEM:
One fire hydrant located near the house near the house of Hydrant outlet, at each floor the main Fire-hydrant at the underground water tank with a capacity to discharge 500 litres per minute at 3 bar pressure. The main Fire-hydrant should be connected to the bottom of the Hydrant tank with a stop valve and a key to act as a Down - cone.

2. FIRE LIFT:
The fire lift and all the lift should have a provision to operate automatically in case of fire. The fire lift should be connected to the main Fire-hydrant tank with a stop valve and a key to act as a Down - cone. The fire lift should be connected to the main Fire-hydrant tank with a stop valve and a key to act as a Down - cone.

3. FIRE ALARM:
The fire alarm call point to be installed at each floor with sounder capable of being heard all throughout the building.

4. FIRE EXTINGUISHERS:
One Carbon Dioxide (CO2) type extinguisher of 4.5 kg with ISI mark and one extinguisher of Dry Chemical Powder (DCP) type extinguisher with ISI mark to be installed on each floor in case of commercial building.

5. STAIRCASE:
The staircase has to be open from at least one of the sides of the staircase to the open area of the building. It has to be provided to prevent from getting smoke logged. The Fire-Door-come should be located in the staircase or close to it to make it easily appreciable in case of fire from the floor below or above.

6. ASBESTOS:
The presence of 200 kg. of asbestos or more should be provided with Asbestos Sprinkler system with at least one sprinkler head for actual fire fighting purpose.

7. LIGHTNING ARRESTER:
Lightning arrester should be installed and be properly earthed to prevent damage to the building when the lightning strikes.

8. PHOTO LUMINESCENT (AUTO GLOW) SIGNAGES:
In the building there is a confined area or if it has an enclosed staircase or a road leading to the ground level, it should be provided with Photo Luminescent (Auto Glow) Signages. The signage should indicate the fire fighting, the safety equipment leading to the ground level.

9. ELECTRIC POWER SUPPLY TO THE ENTIRE FIRE SAFETY SYSTEM:
Electric supply to the fire pump, fire alarm system, address presentation system and fire lift should be made available from the main Electrical supply. (i.e. from Electric power supply of the company). This is to ensure availability of power supply to the fire protection & safety system even after the main electrical supply to the building is switched off at the time of fire.

10. INDIVIDUAL FIRE SAFETY SYSTEM:
FIRE SAFETY SYSTEM SHOULD BE PROVIDED IN INDIVIDUAL SHOW ROOM BY OWNER.

IMPORTANT INSTRUCTIONS:
After inspection of a service building by the fire service authority, the fire officer will issue a certificate of approval. The certificate of approval will be valid for a period of 12 months. The certificate of approval will be valid for a period of 12 months. The certificate of approval will be valid for a period of 12 months.
